

COMPLETED: Incorporate "method=upgrade"?

Posted by prpi - 2009/08/12 22:22

If the module is uninstalled and reinstalled, the locations have to be reset. I have hacked the XML to add "method=upgrade" to the install clause so that I can update the module without losing settings. There don't appear to be any ill effects. Could this be made part of the standard distribution, please?

Thanks for a very useful component.

The upgrade method has been incorporated into the new version of the calendar v0.93

Regards

Toni
