

## Show hits for events

Posted by olavfn - 2010/01/20 14:56

---

This is more a question about eventlist, but their forum is down ...

I want to see how many times people has clicked each event.

Is there a plugin for doing this?

My feeling is no. I think you're going to have to rely on something external e.g. Google Analytics and GA Events (click tracking). I'm looking at this too as I want to track how effective any of our stuff (Eventlist/calendar/Latest Events) is and how successfully we get someone to click our downloadable booking forms. I'm going to add Google Analytics (see GA Events) click tracking to the href on the downloadable PDFs but AFAIK there is nothing inside schlu.net stuff.
