

Ajax 404 Error - New version of calendar available

Posted by toni - 2011/05/09 22:28

A new version of the Ajax calendar is now available in Downloads which fixes the 404 error which comes up after clicking the ajax calendar link a couple of times.

The error is a result of a change to a Joomla file in Joomla 1.5.23 patch.

If you have upgraded or installed Joomla 1.5.23 then you will need the new Ajax calendar version.

The new version can be installed over the top of the old version. If you have modified your css file - please save it before updating.

Please note there are now 2 versions - one which works with Joomla 1.5.23 and one which works with Joomla versions 1.5.22 and less.

Please ensure you load the correct module.

You get the Ajax 404 error if you have got the wrong version for your Joomla version.

Regards

Toni
