

## Styles with more than one calendar

Posted by Steph282 - 2011/07/31 13:26

---

Hi,

I'am using two Eventlist Ajax Calendar in a same page.

How can I have different styles for each other ?

I already try to use the module suffix class but it's not working.

In the source web page the class names are not modified with the suffix.

Probably I'am doing something wrong, do you have any example how to do it ?

Thank's for your help.

Hi

In the module settings you will find a setting that says use default stylesheet or type in where to find an alternative.

e.g. `modules/mod_eventlistcalqajax/mystylesheet.css`

You can create `mystylesheet.css` by cloning the existing stylesheet - `mod_eventlistcalqajax.css` and changing colours, styes etc

Regards

Toni

Hi Toni,

I'am using already two different stylesheets.

In the generated web page source, the both styles are loaded but the calendars are displayed all together with the same style.

You can have a look to the following address :

[http://www.fiez.ch/index.php?option=com\\_content&view=article&id=96&Itemid=48](http://www.fiez.ch/index.php?option=com_content&view=article&id=96&Itemid=48)

The two calendars in the middle of the page should display events in red and not in green like the

---

module on the left.

Thank's for your help.

Best regards.
