

Event Recurrence (Weekly)

Posted by Darken - 2011/08/08 19:02

Hi, I have set my events as recurring on a weekly basis. However when viewing the calendar, the events are only shown on their original days. Eg, an event on Monday doesn't appear on the follow Monday as well despite me setting weekly recurrence for it.

Please help! Thanks.

Hi

The calendar is behaving correctly. Its the way recurring events works (and this is part of eventlist not the calendar)

The next event is only generated after the current one expires.

The best way I've found round this is if you have a weekly event - set 4 recurring events that recur every 4 weeks a week apart. Then you always show the next 4 events and when one expires the next shows for 4 weeks time.

Regards

Toni
