

Hit and Miss in 1.7

Posted by ckwitzel - 2011/11/08 21:05

I was hoping the 1.6 version would work in Joomla 1.7.1. I am able to get the small calendar to work on the left side of the page on every page, but when I try to insert it in another position on just one page I get the attached error. Please let me know if there is a solution to this as I have had success using this module on my 1.5.23 site. http://extensions.qivva.com/images/fbfiles/images/QIVVA_Calendar_Error.jpg
