

EventCalendar for Citys Problem

Posted by T_H_O_M_A_S - 2011/11/24 10:53

Hello,

first thanks a lot for this great calendar. My Problem ist, to make the calendar work with citys. So that only Events from one city are shown.
So I try to modify the calendar:

First in the xml file a make a new param:

Then in the helper.php I ad this:

```
$city = $params->get( 'city', 'Berlin' );
```

Now I try to modify the SQL-call so that only events are coming from the database from the city. My Problem is that I'm not a programmer or so and my code doesn't work:-(Here is my last try:

```
$query = 'SELECT a.*, 1.city, l.venue, DAYOFMONTH(a.dates) AS created_day, YEAR(a.dates) AS  
created_year, MONTH(a.dates) AS created_month,c.id AS mcatid,c.catname,l.id AS  
mlocid,l.venue,1.city,'
```

```
. ' CASE WHEN CHAR_LENGTH(a.alias) THEN CONCAT_WS(':', a.id, a.alias) ELSE a.id END as slug'  
. ' FROM #__eventlist_events AS a'  
. ' LEFT JOIN #__eventlist_categories AS c ON c.id = a.catsid'  
. ' LEFT JOIN #__eventlist_venues AS l ON l.id = a.locid'  
. $wherestr  
. ' WHERE 1.city = '$city'  
. ' AND c.access
```

Hallo,

first, thanks for your Mail Toni. Maybe I need a new monitor to see that this is a "l" and not a "1" ;-)

This query now work for me:

```
$query = 'SELECT a.*, city, l.venue, DAYOFMONTH(a.dates) AS created_day, YEAR(a.dates) AS  
created_year, MONTH(a.dates) AS created_month,c.id AS mcatid,c.catname,l.id AS mlocid,l.venue,'  
. ' CASE WHEN CHAR_LENGTH(a.alias) THEN CONCAT_WS(':', a.id, a.alias) ELSE a.id END as slug'  
. ' FROM #__eventlist_events AS a'  
. ' LEFT JOIN #__eventlist_categories AS c ON c.id = a.catsid'  
. ' LEFT JOIN #__eventlist_venues AS l ON l.id = a.locid'  
. $wherestr  
. " AND city = '{$city}'"  
. ' AND c.access
```

Re:EventCalendar for Citys Problem

The change the URL so that only events from one city are shown i have change line 198 (helper.php) in:

```
$evlink = 'index.php?option=com_eventlist&view=day&id='.  
$tdate.'&filter='.$city.'&filter_type=city&Itemid='.$FixItemID;
```

Now every thing work fine for me (in the calender i have select "id overwrite" to work).

At the moment I must disable ajax, because with the new version of sh404sef it doesn't work. (I start a new topic for this)

Greets Thomas
