

Problem with sh404sef

Posted by T_H_O_M_A_S - 2011/11/25 12:33

Hello,

with the new Version of sh404sef I have URL problems (only if axay is enable):

In the first side of the callender every sef-url work fine. But if I change the month the urls are not longer right they become something like this:

/events/events/day/20102612

All this urls make a 404 Error...

I look in to the sef-plugin for eventlist and the "rout for dayviews" is right. At the first side of the calendar every thing is working like it stand in the sef-plugin.

The problem are the other months. It looks like the calendar ignore the rule, but i don't understand why:-{
